

Full-stack engineer with 10+ years shipping production web and mobile apps in Ruby on Rails, React, and React Native. Tech lead on GiveCampus's Events product. I build AI tooling with Claude Code and MCP that gives agents safe access to production systems: observability, databases, and CI.

Experience

GiveCampus · Senior Software Engineer, Events & Online Giving · Remote Aug 2023 – Present

- Tech lead across the Events product: Event Sequences (scheduled outreach to dynamic recipient segments), ticket packages, affiliation-restricted tickets, reusable form fields, guest list revamp, backend registrations, and custom reporting.
- Led name tag printing for on-site check-in: server-rendered ZPL templates sent through Zebra's cloud API to ZD621 printers, plus a provisioning playbook. It debuted at the partner conference and drew a wave of beta requests.
- Led role-based Events permissions for large schools, shaped by discovery calls with partner universities. Tech lead on promo codes (requested by hundreds of partners) and bulk offline registration uploads.
- Built team AI tooling: a SolarWinds Observability MCP server for debugging production logs by request ID from Claude Code, and CI Patrol, which uses Claude to classify flaky CI failures and rerun them automatically.

Brightside Health · Senior Software Engineer May 2022 – Aug 2023

- Helped launch a company-wide crisis care program. Built a React Native app that lets in-house pharmacists handle prescription refills.
- Rebuilt patient–therapist matching on the Rails API to improve treatment outcomes. Mentored mid-level and junior engineers.

ReferralExchange · Software Engineer, Platform Team Oct 2017 – May 2022

- Ran experiments on and maintained the lead funnel (thousands of leads a month), and built the mobile app thousands of agents use to accept leads.
- Built a three-way calling system on Twilio. Ran AWS infrastructure and Elasticsearch across environments, and led application upgrades.

Infuse · Software Engineer Aug 2016 – Sep 2017

- Lead engineer on a point-of-sale product for a car wash chain processing \$10M+ a year. Reduced the AngularJS frontend by 30% and migrated apps from Parse to Heroku and MongoDB.
- Built an iOS geolocation-based video streaming app in Swift on the Twilio Video SDK, and ran the company hackathon.

AI & Open Source

- **pg-redact-mcp**: a Postgres MCP server that detects PII (heuristics + Microsoft Presidio) and masks it before results reach the AI, with human-approved reveal.
- **ClawTalk**: a native iOS app on the App Store for talking to self-hosted AI agents. Built with SwiftUI, on-device WhisperKit speech recognition, streaming responses, and a Bedrock + Terraform backend.
- **SolarWinds Observability MCP** and **CI Patrol** (see GiveCampus); **unreal-mcp** (127 tools across 16 Unreal Engine subsystems); MCP servers for Email on Acid, Mailgun, and multi-database Postgres; and **Context Share**, a Claude Code plugin for handing off sessions across machines.

Skills

AI engineering	Claude Code, Model Context Protocol, Claude API, AWS Bedrock, agent orchestration, subagents, context engineering
Languages	Ruby on Rails, JavaScript/TypeScript, React, React Native, Swift/SwiftUI, Node.js, Go, Python
Infrastructure	PostgreSQL, Elasticsearch, AWS, Terraform, CircleCI, SolarWinds/Papertrail, Stripe, Twilio, Zebra/ZPL

Education

University of Southern California · B.A. Interactive Entertainment, School of Cinematic Arts 2011
